READ THIS FIRST

This lists the checks this appliance ran, and signs that list.

Operator-Verified is not PASS. The appliance cannot confirm the values were compared.

WHAT THIS PROVES

1. If this certificate is signed (see below), the signature was made by the key named there, and the listed files are the ones it covers. If it is not signed, neither of those is established here.
2. Each listed check ran with the stated result on the appliance that wrote this file. That is this appliance's own record of its own work, not independent evidence, and nothing here proves the appliance itself was untampered. See the section below.

WHAT THIS DOES NOT PROVE

- A signature proves authorship, not device integrity.
- This is not a vendor endorsement.
- Only the listed checks are attested here.
- This confirms addresses only, not the descriptor.
- A swapped cosigner key would not be detected.
- A changed key order or threshold is not detected.
