

Confidence Report

A wallet backup record

SEED VERIFICATION

READ THIS FIRST

This is proof that a Bitcoin wallet's address derivations, extended public keys and output descriptors were independently checked on an offline device.

Important. It does not contain the secret words and cannot move money. It is safe to store.

Privacy. The extended public keys and addresses below cannot spend, but they reveal every past transaction and every future address of this account to anyone who holds them. Treat this report as financially sensitive, and share it only with people you intend to have that visibility.

WHAT WAS VERIFIED

DATE	2026-08-05 12:49:22 UTC
BACKUP FORMAT	BIP39 seed phrase (12 words)
SEED LENGTH	12 words
LANGUAGE	English
PASSPHRASE	No
MASTER FPR	73C5DA0A
NETWORK	Bitcoin mainnet
AIR-GAP	VERIFIED
VERSION	v1.0
SEED PATTERN	all symbols identical, a long repeated run, highly repetitive

HOW TO RE-VERIFY • NO SEED REQUIRED

1. Import an extended public key from the following pages into a watch-only wallet on its stated derivation path (Sparrow accepts every key form), or re-run Bitcoin Witness with the same seed.
2. Confirm Receive #0 matches the address shown here for that path.
3. Recompute the Report SHA-256 in the footer and confirm it matches — any change to the document changes the hash. If the document is independently GPG signed, verify that signature also. Re-verify on the appliance: menu → Verify File Integrity, or run 'python3 confidence_report.py --verify <this-file>' (prints OK).

Recovery path. Re-enter this seed phrase on a Bitcoin Witness appliance (or any BIP39-compatible wallet) to spend.

Bitcoin Witness. Verify, Attest, Inherit.

APPENDIX — TECHNICAL RECORD

Address derivations for the same wallet under each standard it supports.

DERIVATION RESULTS
